

ALPS International Sector Dividend Dogs ETF

Fact Sheet | September 30, 2023

VALUE, INCOME, DIVERSIFICATION

The ALPS International Sector Dividend Dogs ETF (IDOG) is an Exchange-Traded Fund that applies the 'Dogs of the Dow Theory' on a sector-by-sector basis using the S-Network Developed International Equity 1000 Index as its starting universe of eligible securities. This strategy provides the following potential benefits:

- **High Dividend Yield Relative to International Large Cap Indices** – Starting with a smaller, quality universe such as the S-Net Developed International Equity 1000 Index diminishes the likelihood of troubled and financially distressed companies entering the Index and allows dividend yield to be the primary selection criterion for the Index.
- **Sector and Stock Diversification** – IDOG provides high dividend exposure across all 10 sectors of the market by selecting the five highest yielding securities in each sector and equally weighting them. This provides diversification at both the stock and sector level.
- **Dogs Theory** – IDOG isolates the S-Net Developed International Equity 1000 Index constituents with the highest dividend yield in their respective sectors providing the potential for price appreciation as market forces bring their yield into line with the overall market.

¹ Fund inception date: 6/27/2013

² S-Network International Sector Dividend Dogs Index: a portfolio of stocks derived from a universe of mainly large capitalization stocks domiciled in developed markets outside the Americas (the "S-Network Developed International Equity 1000 Index"). The IDOGX methodology selects the five stocks in each of the ten GICS sectors that make up the universe which offer the highest dividend yields as of the last trading day of November. The fifty stocks that are selected for inclusion in the portfolio are equally weighted.

³ Morningstar Developed Markets ex-North America Index: measures the performance of companies in developed markets ex-North America. It covers approximately 97% of the full market capitalization in the Developed Markets ex-North America.

Important Disclosures & Definitions

An investor should consider the investment objectives, risks, charges and expenses carefully before investing. This material must be preceded or accompanied by the prospectus. Read the prospectus carefully before investing.

Shares of ETFs are bought and sold at market price (not NAV) and are not individually redeemable.

Performance data quoted represents past performance. Past performance is no guarantee of future results; current performance may be higher or lower than performance quoted.

All investments are subject to risks, including the loss of money and the possible loss of the entire principal amount invested. Additional information regarding the risks of this investment is available in the prospectus.

The Fund is subject to the additional risks associated with concentrating its investments in companies in the market sector.

Diversification does not eliminate the risk of experiencing investment losses.

The Fund's investments in non-US issuers may involve unique risks compared to investing in securities of US issuers, including, among others, less liquidity generally, greater market volatility than US securities and less complete financial information than for US issuers. In addition, adverse political, economic or social developments could undermine the value of the Fund's investments or prevent the Fund from realizing the full value of its investments. Finally, the value of the currency of the country in which the Fund has invested could decline relative to the value of the US dollar, which may affect the value of the investment to US investors.

The Fund employs a "passive management" - or indexing - investment approach and seeks investment results that correspond (before fees and expenses) generally to the performance of its underlying index. Unlike many investment companies, the Fund is not "actively" managed. Therefore, it would not necessarily sell or buy a security unless that security is removed from or added to the underlying index, respectively.

Dogs of the Dow Theory: an investment strategy which proposes that an investor annually select for investment the ten Dow Jones Industrial Average stocks whose dividend is the highest fraction of their price.
