Important Disclosures & Definitions

An investor should consider the investment objectives, risks, charges and expenses carefully before investing. This material must be preceded or accompanied by the prospectus. Read the prospectus carefully before investing.

Shares of ETFs are bought and sold at market price (not NAV) and are not individually redeemable.

Performance data quoted represents past performance. Past performance is no guarantee of future results; current performance may be higher or lower than performance quoted.

All investments are subject to risks, including the loss of money and the possible loss of the entire principal amount invested. Additional information regarding the risks of this investment is available in the prospectus.

Concentration in a particular industry or sector will subject the Fund to loss due to adverse occurrences that may affect that industry or sector. The Fund may use derivatives which may involve risks different from, or greater than, those associated with more traditional investments. A Fund's emphasis on dividend-paying stocks involves the risk that such stocks may fall out of favor with investors and underperform the market. Also, a company may reduce or eliminate its dividend after the Fund's purchase of such a company's securities.

The securities of small capitalization companies are often more volatile and less liquid than the stocks of larger companies and may be more affected than other types of securities during market downturns. Compared to larger companies, small capitalization companies may have a shorter history of operations, and may have limited product lines, markets or financial resources.

The Fund employs a "passive management" - or indexing - investment approach and seeks investment results that correspond (before fees and expenses) generally to the performance of its underlying index. Unlike many investment companies, the Fund is not "actively" managed. Therefore, it would not necessarily sell or buy a security unless that security is removed from or added to the underlying index, respectively.

FTSE USA Small Cap Qual/Vol/Yield 3% Capped Factor Index: designed to reflect the performance of high quality US small-cap equities exhibiting low volatility and high dividend yields. Quality is measured by profitability and leverage. Constituents are selected and weighted based on quality, volatility and yield characteristics.

Morningstar US Small-Cap Broad Value Extended Index: designed to provide comprehensive, consistent representation of the small-cap value segment of the US equity market.

O'Shares U.S. Small-Cap Quality Dividend Index: designed to reflect the performance of publicly-listed small-capitalization dividend paying issuers in the United States that meet certain market capitalization, liquidity, high quality, low volatility and dividend yield thresholds. The quality and low volatility requirements are designed to reduce exposure to high dividend equities that have experienced large price declines.

Russell 2000 Value Index: measures the performance of the small capitalization value sector of the US equity market.
