Level Four Capital Management Investment Process

Level Four invests with a business owner mindset, utilizing a process that is built upon independent fundamental research. The team seeks out companies that are trading at a discount to the long-term intrinsic value of the business; intrinsic value is the present value of the future free cash flows that are generated by that business. The process seeks to invest in companies that are expected to grow their value over time through efficient investment and competitive advantage.

Investment Objective

The Fund seeks maximum total return and above peer average risk-adjusted return.

Investment Philosophy

- Invest primarily in equity securities of carefully selected, high-quality US companies that are trading at or below their intrinsic value.
- Seek high return on capital, high quality financial reporting, a strong management team and powerful product, service or market position.
- Adhere to a long-term, portfolio-oriented approach.

Investable Securities

Under normal circumstances, the Fund will invest at least 80% of its net assets in common stocks of large-capitalization companies. For these purposes, “large-capitalization companies” are those that, at the time of investment, have market capitalizations within the range of market capitalizations of companies appearing in the Bloomberg US 1000 Growth Index.
